

PROBLEM

The inability of AI to acquire human-like abilities

The inability of AI to teach instantly

The inability of avatars to move in the metaverse universe by themselves

AVAILABLE ALTERNATIVES

2nd generation deep learning

3D animations

Follow-up humans manually

COST STRUCTURE

2 years financing and advertising expenses of a team of 8 people with half a million dollars

SOLUTION

We will handle it by developing our algorithms

Demo is available

MAIN CRITERIA

The ability of avatars' teaching by each user

The introduction to use of autonomous avatars in metaverse universes

INCOME STREAMS

More talent purchase with tokens through apps, mobile ad earnings

UNIQUE VALUE PROPOSITION

3rd wave AI

HIGH-END CONCEPT

The production of assistance and digital twins

CHANNELS

Technology advertisements

YouTubers

Twitter

UNFAIR ADVANTAG

The algorithm that we have developed through 2 years

Being the first in sector

CUSTOMER SEGMENTS

FIRST USERS

Digitize their experiences

Metacone

3RD WAVE

ARTIFICIAL INTELLIGENCE

By focusing on 3rd wave artificial intelligence, Metacone will focus on having the ability to learn with its own algorithms, much more similar to how humans learn, rather than being improved with a high number of labeled training data. It will both decrease the need for big data sets and fix the problem of misleading training data. The signs of progress in computer technologies will be a base for new signs of progress in this area and will be helpful for the growth of Metacone.

EVERYTHING IS THE REPETITION OF ITS SMALLEST PART

Discover the 3rd wave of artificial intelligence of the 2030s.

Instead of big data sets, it will provide the ability of self-learning with algorithms that is similar to humans.

Have a virtual baby and make it your assistant.

The miner AI that you educate works instead of you.

ABOUT SYSTEM

To apply the technologies of the future to the present and to make them commercially available.

Token features: It will be the 3rd generation artificial intelligence currency. To get advanced artificial intelligence features, this token will be required.

To make virtual babies into assistants by gaining intelligence features. The coins that can be used in mining will be produced in the 1ST quarter of 2025.

**INNOVATOR
MACHINES**

HI-TECH

Metacone

TECHNOLOGY FUNCTION

Creating virtual twins by transferring their experiences will be provided for everyone.

These virtual twins will be able to move on their own in metaverse universes and earn money by doing things like mining.

PROGRESS

ABILITY

Your avatars will be work in universes for you.

Metacone

METACONE ECOSYSTEM

COMPUTER

With mining computers, each user will be able to earn coins by purchasing or renting a private server.

%25

PREPARED FEATURES

User will develop faster with ready-made algorithms produced by Metacone.

%25

TRAINING

Each user will be able to create different avatars by giving their own special training to their avatars.

%25

METaverse UNIVERSES

Avatars that are created specially for metaverse universes and worker avatars

%25

MOBILE VIRTUAL BABY APPLICATION TECHNIQUE FEATURES

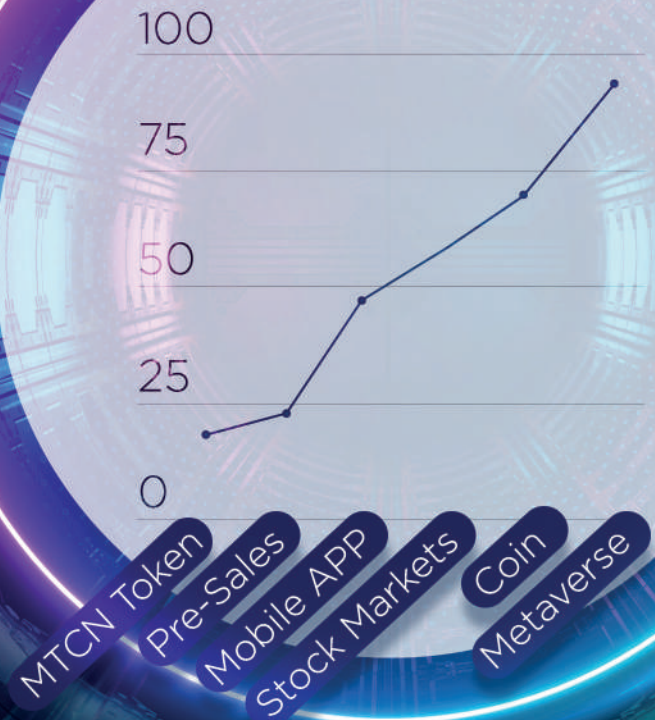

- First versions will be start as game base.
- Characters will be basic level 5 different types (human, animal etc.)
- There will be access to the camera, microphone and speaker of the mobile phone or computer.
- Memorization, learning-curves will be created randomly.
- It will be able to learn words like “mother, father.”
- There will be a sense of attachment to the person in the image over time.
- It will be able to learn basic operations like math, physics.

MOBILE VIRTUAL BABY APPLICATION TECHNIQUE FEATURES

- It will be able to learn regardless of any language.
- They will buy server with artificial intelligence coin.
- They will be able to have new features by buying more coins.
 - Learning-curves can be accelerated by purchasing more coins.
 - Baby will stay alive as long as it stays on (with coins this will be a modifiable feature)
- Babies' walking and moving abilities can be improved for metaverses.
- It will learn higher level engineering knowledge such as the ability to write software in its functions in advanced versions.

DEVELOPMENT PROCESS

Our token selling process will progress with Solana Ecosystem and 15% pre-sale planning will be made with it.

20% of it will be kept as company policy.

We want to be a firm that completes its infrastructure products after 2 years of plan everyone in the world will use its products.

TARGET MARKET

- Game market
- Blockchain miners
- Metaverse users
- NFT Financiers
- Assistant Users

MARKET MAGNITUDE OF

2 TRILLION DOLLARS

Total Market
(Coin, Game, Artificial Intelligence)

180 BILLION DOLLARS

Total Game Market

10 BILLION DOLLARS

Service Targeted
Market

180 billion dollars of the total market of 2 trillion dollars is the game market and 1.7 trillion dollars is the coin market. The place that we are targeted in this market is 10 billion dollars. The volume that will be created will bring huge server loads and big investments will be made for mining systems.

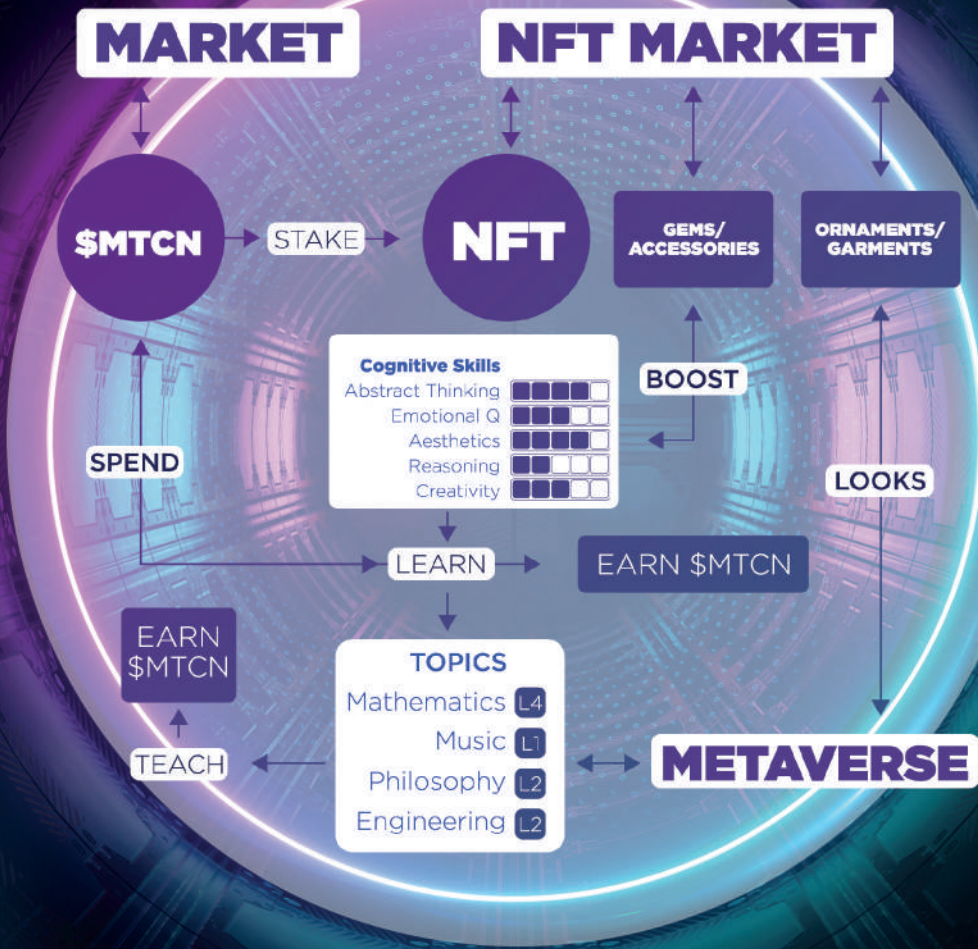

NFT - STAKE

Users start with a baby AI in the app on their phone, which is ready to learn whatever the user wants to teach. The baby AI will be sold as an NFT. Each NFT will come with innate cognitive abilities like reasoning, abstract thinking, EQ etc. Each NFT's learning rates and capacities will be defined based on these predefined capabilities. There will be different ways to increase these capabilities by adding some accessories to the NFT on a limited basis.

NFTs will be distributed to users as a result of 6-month stakes of \$1500 for NFT. NFT for 10% will be distributed randomly with a stake of \$150.

For the next 6 months, MTCN will be staking, giving them extra powers with accessory NFTs.

NFTs will be able to be traded between users at the end of the 6th month.

TOKENOMICS

The birth of NFTs is an important milestone. Beside NFTs earned with the stake, we will also be releasing some NFTs for new users to mint. A few days after that, all NFTs will be revealed and users will see what cognitive skills their NFTs are born with. 6 months after NFTs are released, they will be functional and the application will be ready to use. Users will carry their NFTs with them on their phones and they will spend some time training their baby AI.

TOKENOMICS

For pre-investment tour %5,
175,000,000 tokens

0.005 \$ = 875,000.00 \$

For special tour 5%,

0.007 \$ = 1,225,000 \$

Total with \$2,100,000 initial investment
it will be released

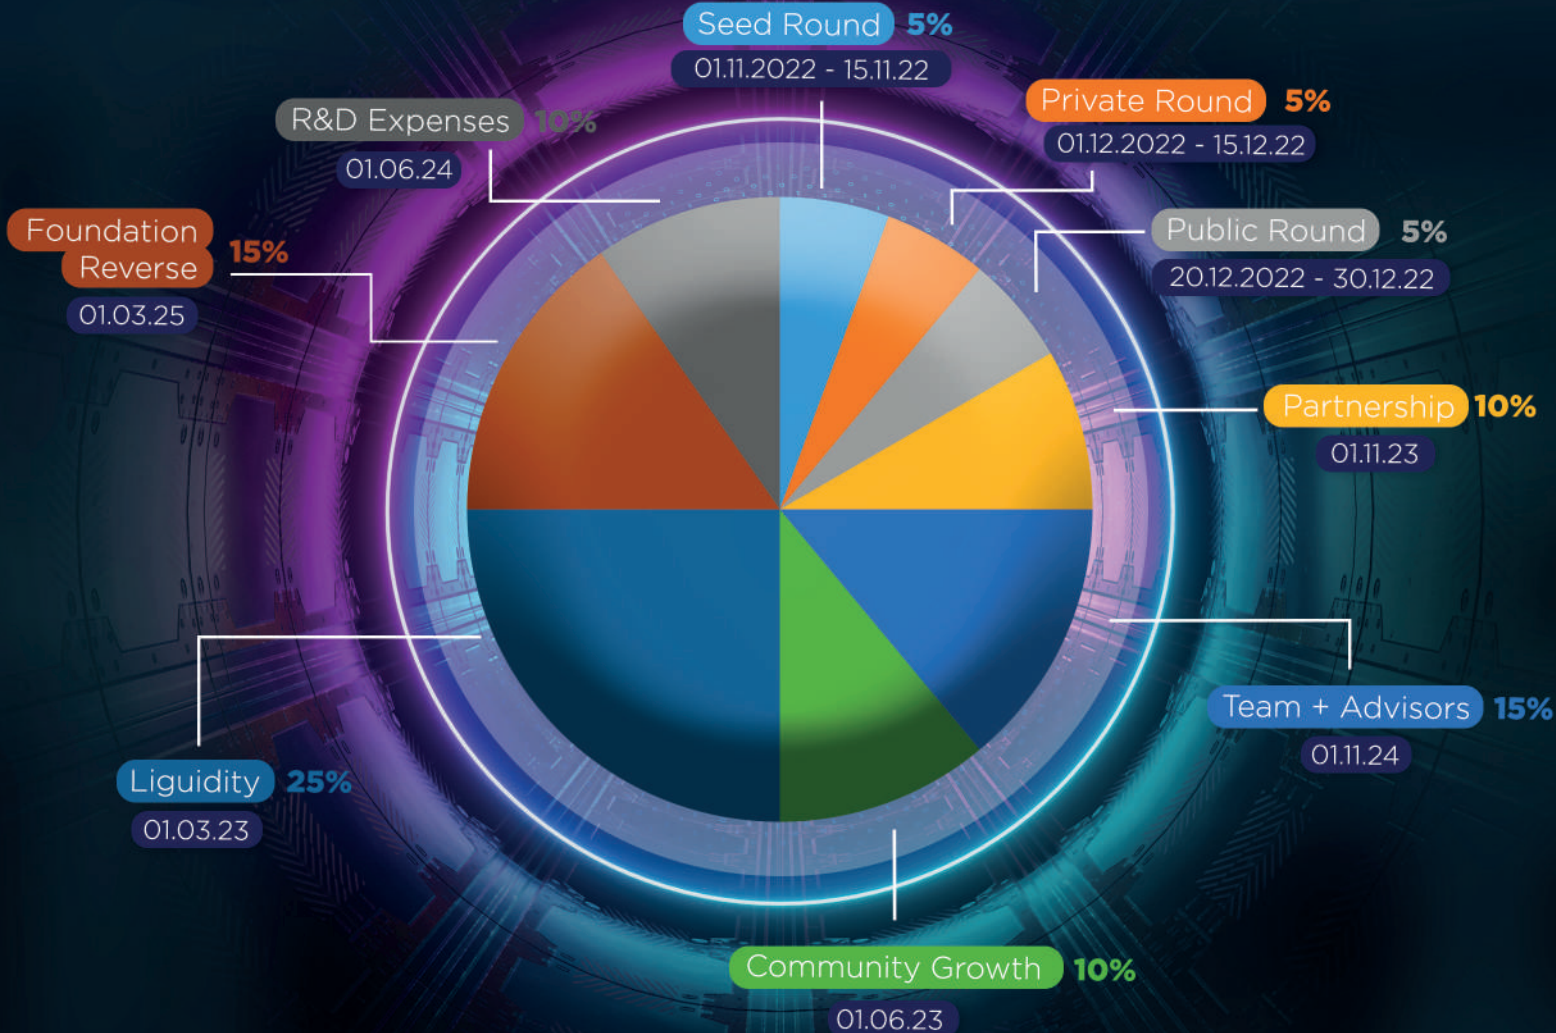

For open market %5 175,000,000 token

0.008 \$ = 1,400,000 \$

Metacone

TOKENOMICS

RIVALS

Singularity.net just has entered to coin market and has created an artificial intelligence market.

Fetch.ai has entered the coin market and works with big data and IOT in the field of artificial intelligence.

INDIRECT OPPONENT

Soulmachine is a 3D animation and autonomy visual producer who is not take place in coin market.

Hanson Robotics came into prominence with Robot Sofia and developed artificial intelligence for communication.

TO DO'S **STEP BY STEP**

STEP 1

Creating token / pre-sales / exist in the stock market

STEP 2

Mobile virtual baby application

STEP 3

Take a step in metaverse universes

STEP 4

Creating coin ecosystem
